

8 Hour Objectives for “Supervising the Crime Scene”

The state of affairs in the General Law Enforcement Community in West Virginia can be improved by in service training specifically in the areas of crime scene investigation. By showing the administrators the latest in high technology, low cost approaches generally used in most modern environments West Virginia can move forward in this endeavor. The objectives of this 4 hour training session will be to show the advanced sensitivity of the recent detection strategies ie, chemical development of latent prints, collection techniques for trace evidence, footprints, serological body fluids etc. As well as AFIS potential and the impact it can have here in West Virginia at this time.

Departments with the information detailed in this class will be able to expand their capabilities and selectively set up a protocol for crime scene procedures.
